What's important for the hotel room of the future? Energy-efficiency, biosourcing and complete revitalizing concept

By: **Carsten Hennig**
November 28, 2016

Paris, France – 28 November 2016

Laurent Delporte, columnist on luxury hotels unveiled his vision of the hotel room concept for the future. During Equiphotel trade fair in Paris, Delporte showed a

prototype that they reflect the coming horizons for 2020; that is, by integrating industry standards for sustainable development and innovative technology.

Hotel Room of the Future by Delporte Hospitality

The concept room in a few words:

- Biorhythmic solution: the light and sound environment correspond in rhythm to the key moments of the day
- Adjustable furniture to provide versatile room functionality
- Low-energy facilities & equipment: to reduce energy consumption
- Basic needs ensured: a good night's sleep, a satisfying meal...Natural materials: the materials involved come from nature

This room, initially conceived by Delporte Hospitality, will be designed by AW², an international architecture and interior design agency led by architect partners Réda Amadou and Stéphanie Ledoux.

The concept in detail:

“Sleeping well” – Light-modulated wake-up system integrated throughout the entire room and preparation for sleep with gradually dimming lights
The first bed that is 99% natural, along with an ecological bedspread
Natural pillows adapted to your way of sleeping
Natural reduction of light intensity at night to allow for a relaxing sleep

“Well-being for refreshing oneself” – A relaxation pillow adapted to your style of reading or working on bed
A shower for refreshing yourself, as if you were under rain
A foot spa for relaxing your tired feet

“Using energy well” – Solar energy at the heart of the hotel to reduce energy consumption
Tracking energy consumption in the room
Elimination of a minibar, thanks to a robot that will deliver beverages to your room in a snap
Automatic toilets: reduced need for paper and reduction in water use

“Breathing well” – Tracking CO₂ activity in the room
Natural materials from floor to ceiling
Cleaning products for maintaining the room in an ecologically thoughtful way

“Eating and drinking well” – Room service menu adapted to dietary needs based on the time of day (organic products)
Purified water fountain in the bathroom for
